

Apertus Solutions Pvt. Ltd.

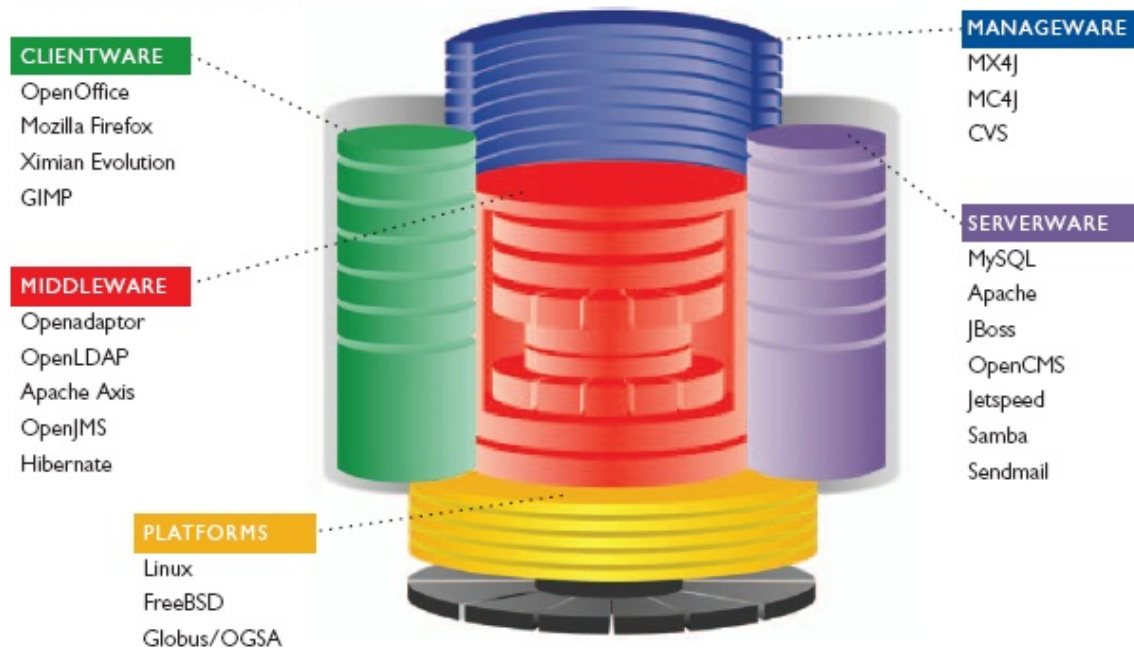

Company Profile

It's no exaggeration to say that open source represents the most significant change ever in the software industry. Open source's new model of software development and distribution creates enormous challenges for both software users and vendors. It's a tectonic shift, as significant as the Internet.

Eventually it will affect everyone who works with software, including traditional vendors. But to date, beyond Linux, open source has not changed the way most organizations build software and run their businesses. We believe that Open source is not just Linux. It is moving up the stack and offering broad collection of Software's like databases, application servers, deployment tools, COTS, business applications (like ERP, CRM, and Business Intelligence etc) and desktop applications.

Check the following figure explaining Open source software in any organization's stack.

Open source software permeates the software stack.
This summary highlights the most prominent open source software in each area of the stack.

Source: CSC with Flashmap Systems

We at Apertus provide Training, Services, Support, Migration and Development Programs to achieve this objective.

Advantages of second-generation open source products are:

- ✓ An established community of open source developers sharing code;
- ✓ Faster time to market with higher software quality, reliability and stability; and
- ✓ Freedom from vendor lock-in.

Some benefits as with commercial software

- ✓ A paid, full-time, dedicated development team, providing continuity, a road map of upgrades and professional documentation;
- ✓ Enterprise-level, production and developer support available 24/7/365; and
- ✓ Confidence that the vendor has full rights and/or ownership of all intellectual property in the software.

Apertus will help you to:

- ✓ Understand the opportunities open source offers for your requirements.
- ✓ Select open source products to lower costs or reduce time to market.
- ✓ Understand the implications of open source licenses on your business.
- ✓ Define appropriate processes for the use of open source in your organization.

Forrester Research had done a survey to find reasons of not using open source software. It reveals that 57% of enterprises feel that lack of support and 36% feel lack of skills is their top reasons. **So, we at Apertus have Training, Support and Consulting Services to eliminate these problems and achieve your objectives.**
